### Who we are

eVision Industry Software is the global leader in Control of Work software. Companies in the oil & gas, (petro) chemical and other high-risk industries turn to us to improve control over their operational processes, resulting in fully auditable, real-time corporate risk management as well as increased operational efficiency.

### The value we deliver

Helping companies to continuously be in control of frontline operations, providing an auditable statement of fitness.

- Maximize efficiency (of asset and workforce)
- Mitigate risks
- Increase safety

**Shell** - eVision is Shell's global partner since 2012 to deliver a worldwide standard for electronic Permit to Work and shift logbook across all of Shell's Upstream assets.

This includes all wholly owned assets as well as major joint ventures. Permit Vision is currently operational at hundreds of sites around the world. Shell chose eVision for its ease of use and global enterprise capabilities and scalability. The partnership has been extended in 2014 to include all downstream assets.

**BP** - eVision is BP's global Control of Work partner and implements an integrated suite of products to BP's upstream assets worldwide. Permit Vision is currently operational at multiple assets around the world.

BP especially valued the breadth of eVision's portfolio. The potential of interactive P&ID's, Shift Vision and mobility make eVision a future proof partner.

## Products and services

**Permit Vision** - Permit Vision uniquely incorporates permit to work processes, risk assessment, isolation management, and external work order systems into one Integrated Safe System Of Work (ISSOW).

**JSA/TRA**- The JSA and TRA are designed for cumulative risk assessment, while seamlessly integrating with maintenance systems (such as Maximo, SAP, JD Edwards, Ultimo, Infor, and others).

**LOLC** - eVision's LOLC module is remarkably easy to use, and can either be integrated into the Permit Vision system or used as a standalone tool.

**ORA/ORM** - ORA/ORM is a barrier-based solution that allows senior management in hazardous industries to reduce risk, optimise performance and drive continuous improvement across global operations.

**Shift Vision** is a digital record of everything that happens during a shift. Shift Vision streamlines the communication process and is ideally suited for shift changeovers.

**Incident Vision**- eVision's Incident Vision software system is a multi-purpose incident solution. It tracks and reports near misses, property damage, medical cases (medivac) and spills (oil and chemical).

**Change Vision**- Management Of Change is of vital importance to streamline changes within your facilities. This module provides one central, user-friendly overview of all change processes in and around the plant. Any changes to assets—whether in procedures, equipment, or conditions—are audited, providing more transparency

**Smart Vision**- embodies the next generation of Cumulative Risk Management software. And is designed to give a real-time overview of current operational risk in a simple-to-use dashboard.
