

SHIFT VISION

ADVANCED SHIFT MANAGEMENT SOFTWARE

Shift Vision is an advanced digital shift management tool, designed to capture and make data accessible across your organisation. Shift Vision replaces piles of paper logs, unclear spreadsheets and databases, and integrates information from many different sources into one location. Shift Vision leverages, combines and shows relevant shift data from various inputs. This increases productivity, improves data consistency and offers meaningful insight into shift activities. The logbook and handover centric approach eases the information transfer for both crew and management, creating a workforce that is aware, effective and up-to-date.

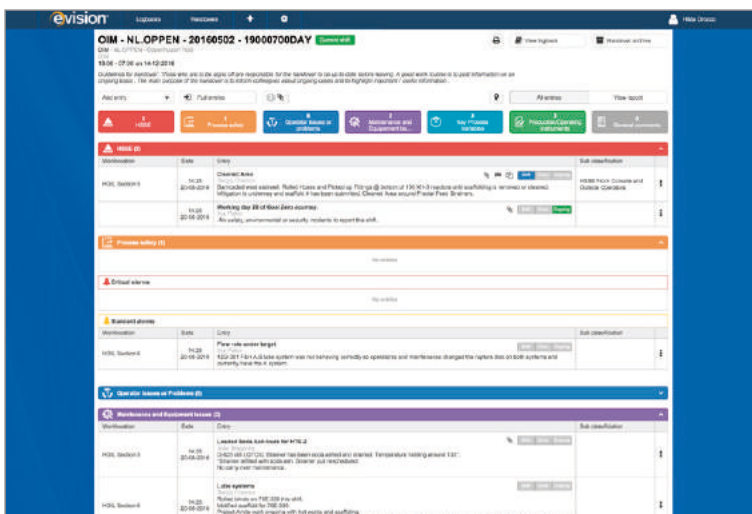

CONNECT YOUR PEOPLE, CONNECT YOUR PLANT

Shift Vision is the easiest way to correctly log, share and monitor shifts. Fully configurable by you, in real time, allowing you to spend less time logging, and more time on operations.

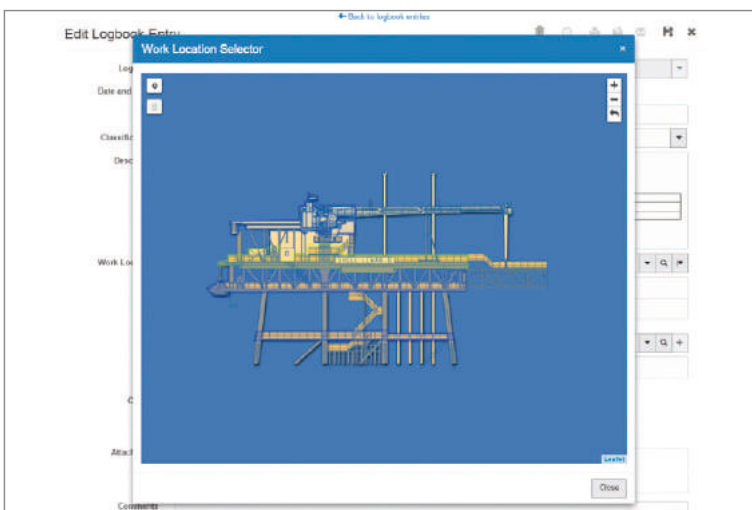

LOG

- **EASE-OF-USE** | Reduce entry creation time and improve overall efficiency with quick (multiple) entry creation, instant search & selection, and fast navigation
- **SAFETY** | Clear graphical overview of what is going on during shifts
- **FLEXIBLE HANDOVER MANAGEMENT** | Pull, share and edit entries from a single view, add attachments and get third-party data during the process

SHARE

- **AWARENESS** | Increase awareness and alignment across teams, by sharing essential shift information with a single click
- **WEB INTERFACE** | Web application allows you to access and share real time shift data wherever you are
- **INTEGRATED** | Integration with the eVision suite and other third-party systems ensures correct information is readily available

MONITOR

- **COMPLIANT** | Full regulatory and process compliance, while creating and supporting a culture of openness and visibility
- **REPORTS** | Standard shift handover reports give management and operators clear, prioritized insight into shift events, which streamlines the decision-making process and handovers
- **AUTHORIZATION** | Authorization control is ensured, based on configurable organizational structure management.

A large-scale industrial facility, likely a refinery or chemical plant, is shown at night. The scene is illuminated by numerous bright lights, creating a high-contrast environment. Tall distillation columns, complex piping networks, and scaffolding are visible. The sky is a deep blue, and the overall atmosphere is one of intense industrial activity.

INCREASE EFFICIENCY

Shift Vision uses a 360 ° safety-efficiency model to ensure optimal operations, saving you thousands of hours annually. The ability to auto-populate recurring shift data allows you to prefill up to 80% of your entries.

ENSURE COMPLIANCE

Shift Vision offers a high level of regulatory and legislative compliance and a fully auditable architecture. Track back and filter through various types of information and turn the lessons learned into actions.

MANAGE WITH EASE

As a web based system, Shift Vision puts minimal stress on your IT infrastructure and is fully separate from core IT, accessible from various systems and devices. The off-the-shelf client configurable nature of the product means that shift management can continue seamlessly, with no customization needed.

ABOUT EVISION

eVision Industry Software creates best-in-class configurable Control of Work software. Innovative solutions that improve the way oil, gas, (petro)chemical and other hazardous industries operate on a global and local scale. eVision enables you to increase safety and operational efficiency, while mitigating risk. With offices worldwide and partnerships with the world's leading system integrators, eVision provides high-quality delivery and support, on location, at all times.
